

# AV Accessibility Research Project

---

Renata Cunha 0898947

Based on the Roku Flashback project we are building in a team I chose 1 audio file and 1 video file and put it accessible for everyone. Here you will see a basic interface with multimedia controls.

I go back on the 50's decade to search images for the background. I chose one image that represents old movies (when they used to use roll film, nowadays we use cloud or USB cards).

The other image I chose remembers a disc. The audio is Elvis Presley's song, which means that is older than the image, but I chose a disco background because it represents all the funny, colors and shining that music involves and represents.

The font I chose is Industry Inc. I, particularly like this one, is simple and skinny, clear to read. The colour I chose are shades of orange, remember me the Gold times.

Casablanca was the movie I chose. I need to listen to it a hundred times to do the transcript. I know it is not perfect yet, and I probably missed a lot of words that I couldn't understand. In times like these, all my friends that could help me are in quarantine so I couldn't count with too much help as I needed.

The subtitles are important to include because we need to think about the people that cannot listen, so I include it as well.

For the development part I needed to go back on many files from class, watch the new classes and ask some friends a few doubts I had.

The project:

The project consists of one single page, with two screens separated by two pictures representing each subject. On the one side there is music and on the other side there is the movie. When clicked on the play button of each, you will be able to see the movie or

to listen to the music. When clicking on the button for subtitles you will be able to see the text of each one in a separated box.  
It is a simple but very funny project.
